

Credit Card Portfolio Analytics Report

Insights from the [Customer Report](#) & [Transaction Report](#) Power BI Dashboards

Prepared from: [Credit_Card_Financial_Dashboard-Customer.pdf](#), [credit_card_Transaction_report.pdf](#)

Report generated: July 2026

Executive Summary

This report consolidates findings from two linked Power BI dashboards covering a credit card portfolio: a **Customer Report** (demographics, income, and revenue by customer segment) and a **Transaction Report** (spend behavior, card category performance, and quarterly trends). Together they give a full view from who the customers are to how they actually use their cards.

The portfolio generates **55.4M** in total revenue against **577M** in total customer income, with total interest income of **7.9M** and a customer satisfaction score (CSS) of **3.19**. On the transaction side, revenue of **10.23M** is drawn from **168K** transactions worth **8M**, generating **1.35M** in interest — and the **Blue** card tier alone accounts for roughly 95% of transaction revenue.

Total Revenue 55.4M	Total Income 577M	Total Interest 7.9M	CSS Score 3.19
------------------------	----------------------	------------------------	-------------------

1. Customer Report Dashboard

This dashboard profiles the customer base by revenue, income, demographics, and card tier, filterable by quarter, gender, income level, and card category.

Key Metrics

Total Revenue 55.4M	Total Interest 7.9M	Total Income 577M	CSS 3.19
------------------------	------------------------	----------------------	-------------

Revenue by Customer Job

Self-employed customers are the largest revenue contributor, followed closely by businessmen and blue-collar workers. Retirees contribute the least, consistent with typically lower and more fixed incomes.

Customer Job	Revenue	Total Trans. Amt	Sum of Income
Self-employed	1,39,89,258	11,224,983	7,54,35,370
Businessman	1,06,38,013	8,595,931	18,72,92,178
Blue-collar	86,71,904	6,994,023	7,24,63,375
Govt	85,07,474	6,830,372	8,88,56,996
White-collar	83,23,136	6,713,203	10,41,40,130
Retirees	52,81,088	4,241,670	4,87,34,360
Total	5,54,10,873	44,600,182	57,69,22,409

Demographics at a Glance

- **Gender split:** Female customers generate slightly more revenue (29.6M) than male customers (25.8M).
- **Age group:** The 40–50 bracket dominates (14M female / 12M male), followed by 50–60. The 20–30 and 60+ groups are minimal contributors, suggesting the core customer base is mid-career.
- **Salary group:** High-salary customers drive the most revenue (15M/14M), roughly triple the low-salary segment.
- **Marital status:** Married customers (14M/13M) slightly outpace single customers (13M/11M).
- **Education:** Graduates lead revenue contribution, followed by High School and Uneducated segments — education level shows only a moderate relationship with revenue.
- **Top states:** TX and NY are the leading states by revenue (10M/10M and 6M/6M), with CA, FL, and NJ trailing.

Revenue Trend (Jan–Oct 2023)

Monthly revenue oscillates between roughly 0.36M and 0.68M with no clear seasonal trend, and female customers (gold line) consistently track at or above male customers (teal line) across most months.

2. Transaction Report Dashboard

This dashboard tracks actual card usage: revenue and interest earned by card category, spend by channel, expenditure type, customer job, and education, plus quarterly transaction trends.

Figure 1: Credit Card Transaction Report dashboard (Power BI).

Key Metrics

Revenue by Card Category

The **Blue** tier is overwhelmingly dominant, generating 97.56L in revenue on 73.6L transactions — roughly 95% of total transaction revenue. Silver, Gold, and Platinum together contribute less than 5%, despite Platinum typically being the premium tier. This imbalance likely reflects Blue being the entry-level, highest-volume card rather than higher per-transaction value in the premium tiers.

Card Category	Sum of Revenue	Sum of Trans. Amt	Sum of Interest Earned
Blue	97,56,766.70	7,359,514	12,88,127.70
Silver	4,22,642.89	316,810	54,547.89
Gold	46,539.59	35,026	6,053.59

Card Category	Sum of Revenue	Sum of Trans. Amt	Sum of Interest Earned
Platinum	5,325.77	3,950	645.77
Total	1,02,31,274.95	7,715,300	13,49,374.95

Spend Behavior

- **Channel:** Swipe transactions dominate (8M), dwarfing Chip and Online (1M each) — the base is not yet strongly digital-first.
- **Expenditure type:** Bills lead revenue (4M), followed by Entertainment and Fuel (2M each), then Grocery, Food, and Travel (1M each).
- **Customer job:** Self-employed customers again lead transaction revenue (4M), consistent with the Customer Report findings, followed by Blue-collar (2M).
- **Education:** Graduates generate the most transaction revenue (4M), mirroring the Customer Report pattern.

Quarterly Trend

Revenue holds steady at 2–3M per quarter, but transaction count dips sharply in Q3 (40.1K, down from 43.5K in Q1) before partially recovering to 42.2K in Q4. Revenue per transaction rose in Q3 despite lower volume, suggesting fewer but larger transactions that quarter.

3. Cross-Dashboard Insights

- **Consistent top segments:** Self-employed customers and Graduates rank #1 in both revenue generation (Customer Report) and transaction revenue (Transaction Report) — a reliable, high-value segment to prioritize for retention and upsell.
- **Entry-tier concentration risk:** The Blue card carries ~95% of transaction revenue and interest income. This is a concentration risk: any change in Blue-tier customer behavior disproportionately impacts total revenue.
- **Untapped premium tiers:** Gold and Platinum contribute minimally despite presumably higher credit limits — these tiers appear under-utilized or under-marketed relative to their potential.
- **Low digital adoption:** Swipe transactions (8M) vastly outnumber Chip and Online (1M each), pointing to an opportunity to migrate customers toward more secure, and often more engaged, digital channels.
- **Q3 dip:** The transaction count drop in Q3 across both dashboards' Q-based filters is worth investigating — whether seasonal, economic, or campaign-driven.

Recommendations

- Investigate and address the Q3 transaction volume dip with targeted campaigns ahead of next Q3.
- Design upgrade incentives to shift high-revenue Blue customers toward Silver/Gold tiers, improving interest yield per customer.
- Promote Chip/Online payment adoption to reduce swipe-related fraud exposure and improve the digital engagement footprint.
- Build targeted offers (e.g., bill-pay rewards, travel/fuel cashback) around the top expenditure categories to increase share of wallet.
- Continue tracking CSS (currently 3.19) alongside revenue metrics to ensure growth does not come at the cost of customer satisfaction.

Data Notes

Figures are drawn directly from the two Power BI dashboard exports as provided. Currency values appear in the original Indian numbering convention (lakhs/crores) as shown on source visuals; totals were not independently recalculated.
